## **Photo Editor Android Application**

**Description:** The application is a simple android photo editing application that utilizes Picasso for some of the operations. It allows the user to add a background image behind the original image. It also allows the user to add frames to the actual image and add brightness/blur effects as well. The application saves the edited pictures on local machine and does offer functionality to share the pictures on Facebook, WhatsApp, Mail etc.

**Requirements:** Requires an Android device running Android Marshmallow (6.0) and up. It does require Internet access to share pictures on social media. The application does not require internet to edit pictures. 250MB of storage space is required for the application and its save data.
